

# RAMYA YERRAMILLI

Product Designer | AI & COMPLEX PRODUCTS | Human- AI Interaction

(347) 386-5073 · ys.ramya@gmail.com · LinkedIn: [linkedin.com/in/ramyays](https://www.linkedin.com/in/ramyays) · Portfolio: [ramyays.com](https://ramyays.com)

## SUMMARY

Product designer with 2+ years of experience across digital product, UX, and interaction design, backed by 6+ years of professional design experience. Designs end-to-end product experiences from workflows and interaction models to prototypes and implementation, and uses UX research to validate product decisions. Recent work includes AI task planning, medication management, generative AI safety, and B2B financial dashboards.

## CORE COMPETENCIES

**UX & Product Design:** Product Discovery · Interaction Design · Information Architecture · User Flows · Wireframing · Prototyping · Design Systems · Data Visualization · Accessibility · B2B & Enterprise UX · Human-Centered Design

**UX Research:** User Interviews · Usability Testing · A/B Testing · Focus Groups · Contextual Inquiry · Generative Research · Mixed-Methods Research · Survey Design & Analysis · Thematic Analysis · Heuristic Evaluation · Research Synthesis

**Product & Collaboration:** Product Strategy · Stakeholder Management · Cross-Functional Collaboration · Workshop Facilitation · Design Critique · Agile/Scrum · Requirements Definition · Design Handoff · Executive Communication

**AI & Technology:** Human-AI Interaction · AI Product Design · Responsible AI · AI Safety · AI Agents · Figma · Figma Make · Dovetail · Maze · Qualtrics · Miro · Cursor · Claude Code · Lovable · Vercel · Power BI · Notion · UX Pilot

## EXPERIENCE

### UX Designer

June 2026 - Present

MeDementia, Miro × Kiro Hackathon · First Place · New York, NY

- Won 1st place by defining the product experience for an AI-assisted medication-management tool designed for people with dementia and their caregivers.
- Owned the end-to-end interaction model, deciding how users navigate medication information, complete tasks, and recover from potential errors.
- Translated accessibility and cognitive-load requirements into simplified navigation, information hierarchy, and interaction patterns for a high-risk use case.
- Took the product from concept to a functional prototype, connecting Figma designs to implementation through Kiro.
- Extended the prototype beyond the competition scope using Claude Code and Lovable, iterating on the product through continued development.

### UX Designer & Project Manager

January 2026 - June 2026

ASAP, AI-Scaffolded Action Planner, Capstone Project · DePaul University · Chicago, IL

- Defined the product interaction model for an AI task-planning experience that converts ambiguous user goals into actionable tasks across work, school, and personal workflows.
- Established the human-in-the-loop decision points, requiring explicit user approval before AI-generated plans could trigger execution.
- Used interviews, focus groups, usability testing, A/B testing, and 12 AI-assisted interviews to identify friction and validate product decisions.
- Translated research findings into product requirements, information architecture, interaction patterns, and end-to-end workflows.
- Took the product from concept to a functional deployed prototype using Figma Make, Cursor, Claude Code, and Vercel.

### UX Researcher

September 2025 - Present

RAISE Lab, DePaul University · Chicago, IL

- Translated recurring user risks in generative AI into product requirements and design recommendations for safer AI experiences.
- Owned research from study definition through participant screening, usability testing, qualitative analysis, and synthesis, using findings to inform product decisions.
- Redesigned recruitment and screening workflows and refined study protocols based on pilot findings and accessibility requirements.
- Synthesized qualitative and social-media data to separate systemic user behaviors from isolated feedback, strengthening the evidence behind product recommendations.

- Reframed research findings around user behaviors, product risks, and design opportunities to support decisions about AI interaction patterns.

### **UX Designer, Data Visualization**

July 2025 - September 2025

MainStreet Advisors, a Fifth Third Bank Subsidiary · Chicago, IL

- Delivered 5+ dashboard recommendations adopted by product, engineering, and design by redesigning a B2B financial dashboard used daily by 5 portfolio managers.
- Rebuilt the information architecture, interaction model, visual hierarchy, and data storytelling from the ground up to make account activity and client changes easier to track.
- Validated the redesigned B2B experience through interviews with all 5 portfolio managers, usability testing, A/B testing, and secondary research.
- Completed more than 100+ design iterations across information architecture, interaction patterns, and data visualizations using Figma and Figma Make.
- Shortened the release timeline by two sprint cycles by bringing research and interaction design into product planning while requirements were still flexible, working directly with product, engineering, and design.

### **UX Researcher & Product Designer**

July 2025 - October 2025

Cost of a Click, Interactive AI Infrastructure & Environmental Impact Installation · Chicago, IL

- Made the resource cost of an AI prompt tangible through an interactive installation that translated each user prompt into a physical water response and visual representation of environmental depletion.
- Designed the complete interaction from user input to resource-use feedback, including the digital interface, physical response, and final water-use visualization.
- Collaborated with engineers to connect the digital experience to the physical installation in real time, triggering a physical water response and video sequence for each prompt.
- Translated complex research on AI infrastructure and environmental impact into an accessible user experience through interaction design, physical feedback, video, and data visualization.
- Designed and built the supporting digital experience in Framer, creating the interaction model and communication strategy for the installation.

### **Design Researcher**

June 2025 - June 2026

International Admissions, DePaul University · Chicago, IL

- Reduced counselor follow-up volume by 20% and increased operational throughput by 30%+ by improving how incoming admissions requests were categorized, prioritized, and assigned across student-facing and internal workflows.
- Improved request routing and ownership by introducing color-coded email workflows that made categories and responsibility immediately visible.
- Consolidated application patterns across 1,000+ records and 50+ markets, making country-level differences easier to identify during admissions review.
- Identified recurring differences in grading systems, education structures, and qualification standards across markets, clarifying requirements that frequently created manual review or follow-up.
- Used Slate and its AI capabilities to identify recurring operational patterns, combining system data with direct observation of admissions workflows.

### **Research Lead & UX Designer**

March 2025 - Present

RAAHI, Dark Pattern Detection Framework & GenAI Study · DePaul University · Chicago, IL

- Won first place among 10+ competing teams by designing a Chrome extension that identifies manipulative interaction patterns in generative AI products.
- Originated the product concept and owned the prototype's structure, UX, and interaction model.
- Created a 16-category detection framework for evaluating manipulative AI interactions across ChatGPT, Claude, and Gemini.
- Translated observed behaviors into structured product requirements and designed how users would identify, interpret, and review flagged patterns.
- Built a working prototype for detecting and reviewing dark patterns by designing the extension's end-to-end user flow and interface, defining the information hierarchy and interaction model for presenting detected patterns.
- Established the product and research structure for an extended evaluation study by defining evaluation criteria, testing requirements, and the prototype experience, enabling consistent assessment across AI platforms.

### **UX Researcher & UX Designer**

November 2024 - May 2025

Wellnut, VR Mental Wellness Product · DePaul University · Chicago, IL

- Validated the product with approximately 70% of tested users rating the concept useful and participants reporting lower stress after use, across usability testing with approximately 20 participants.
- Owned the AI therapist experience, including the interaction flow, avatar, dialogue delivery, and conversational tone.
- Created an approachable AI therapist experience with clear product boundaries by designing how the avatar communicates, responds, and guides users, translating user needs into character behavior and conversational interaction.
- Built safety requirements directly into the product experience by incorporating clinician input into session limits, expectation-setting, and escalation pathways, designing the safeguards into the dialogue flow rather than treating them as separate policies.
- Built and showcased a functional VR prototype for the Jarvis Innovation Challenge using Figma, Blender, Maya, Unreal Engine 4.5, and Meta Glasses, connecting interaction design, avatar, environment, and conversational experience into a working demonstration.

### Senior Designer

January 2023 - July 2024

Aedium Design · Hyderabad, India

- Sustained a 9/10 client NPS across B2B engagements by owning projects from discovery and requirements definition through design delivery and implementation.
- Turned stakeholder requirements into executable design directions through interviews, concept development, prototyping, structured feedback, and design handoff.
- Established a repeatable design delivery process using structured stakeholder reviews and post-implementation feedback to improve decision-making and consistency.

### Senior Design Consultant

April 2021 - December 2022

HomeLane · Hyderabad, India

- Reduced design-to-build latency by 15% across 10+ concurrent projects by translating client requirements into structured specifications and design plans.
- Improved handoff quality and reduced downstream rework by resolving requirements and constraints through iterative design before execution.
- Achieved 80% KPI performance versus a 65% branch average by managing competing customer requirements, project constraints, and delivery deadlines.
- Improved consistency across concurrent projects through repeatable coordination, design review, and quality-control practices.

### Design Consultant

July 2019 - June 2021

TheM Design Studios · Hyderabad, India

- Delivered 15+ end-to-end B2C residential design projects by managing customer requirements, concept development, design documentation, and execution coordination.
- Managed direct customer, vendor, and contractor relationships throughout project delivery.
- Improved consistency in project delivery through repeatable coordination and quality-review checkpoints before handoff and execution.

## EDUCATION

---

**MSc, Human-Computer Interaction** · DePaul University, Chicago, Illinois, United States

**MA, Design Management & Entrepreneurship** · De Montfort University, Leicester, United Kingdom

**Postgraduate Certificate, UX Design** · Indian Institute of Technology Bombay, India

**Bachelor of Design, Interior Design** · Jawaharlal Nehru Architecture and Fine Arts University, Hyderabad, India

## AWARDS

---

**Director's Award for Outstanding Researcher** · RAISE Lab, DePaul University, 2025-2026

**Authorship Contribution Award** · RAISE Lab, DePaul University, 2025-2026

**Outstanding Performance Award** · HomeLane, 2022
